Summary

Software Engineer and 2026 B.Tech CSE (AI & ML) graduate with 1.5+ years of Python, PostgreSQL and full-stack development, also built data pipelines on Azure Databricks with PySpark, SQL and Delta Lake as an aspiring Data Engineer.

Experience

Software Development Engineer, *Blockland India* 10/2025 – 05/2026
Remote

- Built ExpenseApp, an end-to-end expense reimbursement platform (FastAPI, Next.js, PostgreSQL) where employees submit bills, managers and admins approve them, and finance reimburses.
- Designed PostgreSQL tables for claims, approvals and an audit log, so every claim's status and history could be tracked and queried.
- Built spend reports by employee, department, category and month, with bills stored on Cloudinary and auto-generated PDF receipts.

Data Engineering Intern, *Digital Fortress Pvt Ltd* 05/2024 – 10/2024
IIEC, VIT-AP University

- Built batch pipelines in Azure Databricks notebooks using PySpark to read CSV and JSON files from Azure Data Lake Storage, clean them (nulls, duplicates, data types) and save them as Delta tables.
- Followed the bronze → silver → gold layer approach to keep raw, cleaned and report-ready data separate.
- Wrote Spark SQL queries on the Delta tables to build summary tables for reports, and scheduled the notebooks with Databricks Jobs.

Projects

Mukham — Face-Recognition Attendance Platform (Web + Mobile)

- Built a attendance system for companies where employees check in by face in under 10 seconds, on the web and a React Native mobile app.
- Blocked photo and location spoofing with AWS Face Liveness checks and geofencing that accepts check-ins only inside the office perimeter.
- Used an AWS Cognito Identity Pool to give the app temporary, limited-scope AWS credentials for each liveness session, so no long-term AWS keys ship in the client.
- Built customisable attendance dashboards and reports for admins, plus an in-app assistant that reminds users to check in and guides them through the flow.

AI Investment Agent — Multi-step Stock Analysis Tool

- Built an agent that takes a stock ticker and returns a structured report on fundamentals, price trend and recent news for any listed company.
- Pulled stock prices, fundamentals and news from yfinance, cleaned and combined the data with pandas, and passed it to an LLM to generate an analysis report.
- Reduced a minute manual research routine to seconds generated report, with tabular data so every claim can be checked.

Education

Bachelor of Technology in Computer Science and Engineering (AI & ML), 09/2022 – 06/2026
VIT-AP University, Amaravati, AP
CGPA: 7.8/10

Technical Skills

Programming Languages
Python, JavaScript, SQL

Databases
PostgreSQL, MySQL

Cloud and Tools
Azure, AWS, Git, GitHub, Docker

Frontend and Backend
React.js, Next.js, React Native, Tailwind CSS, FastAPI, Node.js, REST APIs, JWT authentication

Data Engineering
PySpark, Spark SQL, Databricks, Delta Lake, ETL basics, pandas

Achievements and Certifications

Represented Digital Fortress at ALEAP, 2024, building and pitching MAuthN, a passwordless authentication product

Oracle Cloud Infrastructure 2025 Certified Generative AI Professional — Oracle, July 2025
